### Sample size and characterization

The sample used in this study consisted of the list of authors of HCPs affiliated with at least one research organization in Spain. Subsequently, this list was normalized by disambiguating the publications mixed up in namesakes and unifying their variants. During this process the nicknames used by the authors to sign their publications were replaced for their full name.

**Author search**   Introducir apellidos del autor buscado.

### Global Rankings

Irrespective of their main field of research, authors have been ranked according to 4 criteria: 1) number of HCP in which the authors played a leading role (**Leading HCP's**), 2) total number of HCP attributed to the author (**HCP's**), 3) number of Outstanding Papers in which authors played a leading role (**Leading OP's**), and 4) total number of OP (**OP's**).

The rest of the authors included in the study are shown within the disciplines of their HCPs.
