Preface	xxiii

1. Introduction

Jeffrey W. Savell

1.1 Meat and muscle	1
1.2 Meat from other animals	2
1.3 Domestication of livestock	3
1.3.1 Cattle	4
1.3.2 Swine	5
1.3.3 Sheep	6
1.4 Trends and developments	6
1.4.1 Meat production	7
1.4.2 Animal welfare	11
1.4.3 Sustainability	12
1.4.4 Kosher and halal	13
1.4.5 Cultured meat	15
1.4.6 Plant-based meat alternatives	16
1.5 Conclusions and future trends	16
References	17

2. Factors influencing the growth of meat animals

Aidan P. Moloney and Mark McGee

2.1 Introduction	21
2.2 Measurement of growth and body/carcass composition	22
2.3 Animal influences on growth of farm animals	24
2.3.1 Physiological age/stage of maturity	24
2.3.2 Genetics	25
2.3.3 Gender	30
2.3.4 Genetic modification	30
2.4 Nonanimal influences on growth of farm animals	31
2.4.1 Nutrient supply	31
2.4.2 Exogenous agents	34
2.4.3 Immunological approaches to increasing growth	38
2.4.4 Environmental influences on animal growth	38

2.5	Interactions between animal and nonanimal influences on growth of farm animals	39
2.5.1	Growth in utero	39
2.5.2	Postnatal growth	41
2.6	Future developments	44
	References	45
3.	The structure and growth of muscle	
	<i>Peter P. Purslow</i>	
3.1	Introduction	51
3.2	The hierarchy of structures relevant to meat: From macroscopic to molecular	53
3.2.1	Carcass level: Meat cuts	53
3.2.2	General anatomy of individual muscles	58
3.2.3	The general structure of the striated (skeletal) muscle cell	62
3.2.4	Structure of the individual intramuscular connective tissues (IMCTs)	73
3.2.5	The structure of adipose tissues	86
3.3	Muscle development and growth	88
3.3.1	Muscle development in embryogenesis and prenatal growth	88
3.3.2	Adipogenesis and fibrillogenesis	91
3.3.3	Fetal development	91
3.3.4	Postnatal muscle growth	92
3.3.5	Muscle cells grow by incorporating satellite cells	96
3.4	Conclusions and future trends	96
	References	97
4.	Chemical and biochemical constitution of muscle	
	<i>Clemente López-Bote and Luis Calvo</i>	
4.1	General chemical aspects	105
4.1.1	Muscle proteins	105
4.1.2	Water	111
4.1.3	Carbohydrates	114
4.1.4	Intramuscular fat	115
4.2	Biochemical aspects	120
4.2.1	Muscle function in vivo	120
4.2.2	Muscle function postmortem	127
4.3	Factors affecting muscle function with possible consequences on meat quality	135
4.3.1	Fiber type, muscle, and anatomical location	135
4.3.2	Species, breed, and lines	140
4.3.3	Sex	143
4.3.4	Age	143

4.3.5	Training and exercise	146
4.3.6	Animal welfare, stress, and oxidative status	146
4.3.7	Diet, plane of nutrition, and fasting	148
4.3.8	Interanimal variability	151
4.4	Conclusion and future trends	152
	References	153

5. The conversion of muscle to meat

*Sulaiman K. Matarneh, Tracy L. Scheffler,
and David E. Gerrard*

5.1	Introduction	159
5.2	Rigor mortis	160
5.3	Postmortem metabolism	162
5.3.1	ATP homeostasis	162
5.3.2	The phosphagen system	163
5.3.3	Glycogenolysis and glycolysis	164
5.3.4	The role of mitochondria	168
5.4	Factors controlling the rate of postmortem metabolism	170
5.5	Factors controlling the extent of postmortem metabolism	171
5.6	Abnormal postmortem metabolism	173
5.6.1	Pale, soft, and exudative meat	173
5.6.2	Acid meat	175
5.6.3	Dark, firm, and dry meat	176
5.7	Presalughter stress	176
5.7.1	Transport and lairage	177
5.7.2	Fasting	177
5.7.3	Stunning	178
5.8	Development of meat quality attributes	178
5.8.1	Water-holding capacity	178
5.8.2	Color	180
5.8.3	Texture	181
5.9	Postmortem handling and meat quality	182
5.9.1	Actomyosin toughening and sarcomere shortening	182
5.9.2	Muscle temperature	183
5.9.3	Electrical stimulation	185
5.9.4	Accelerated processing	185
5.10	Aging and proteolysis	186
5.10.1	The calpain system	187
5.10.2	The caspase system	188
5.10.3	The cathepsin and proteasome systems	189
5.11	Conclusions	189
	References	190

6. Meat microbiology and spoilage

Monique Zagorec and Marie-Christine Champomier-Vergès

6.1	Introduction	195
6.2	Recent advances in meat microbiology and identification of the main bacterial species involved in spoilage	196
6.2.1	Microbiota of various meat products, origin, and shaping	196
6.2.2	New evidences, new genomes	202
6.3	The main microbial contaminants of meat involved in spoilage	205
6.3.1	Yeasts and molds	205
6.3.2	Bacteria	206
6.3.3	Microbial interactions leading to spoilage	210
6.4	Devices for bacterial spoilage monitoring	210
6.5	Major spoilage manifestations	211
6.6	Conclusion	211
	References	212

7. The storage and preservation of meat: I—Thermal technologies

Youling L. Xiong

7.1	Introduction	219
7.2	Chilling	220
7.2.1	Chilling processes	220
7.2.2	Chilling-induced fiber shortening and prevention	221
7.2.3	Meat tenderness changes during chill storage	225
7.2.4	Oxidative changes in chilled meat	227
7.2.5	Superchilling at subfreezing point	228
7.2.6	Chill storage in modified atmosphere environments	229
7.3	Freezing	230
7.3.1	Freezing processes	230
7.3.2	Effects of freezing on muscular tissue	231
7.4	Heating	234
7.4.1	General consideration	234
7.4.2	Pasteurization	235
7.4.3	Sterilization	237
7.5	Novel thermal procedures	238
7.5.1	Ohmic heating	238
7.5.2	Dielectric heating	238
7.5.3	Radiant heating	240
7.6	Future trends	240
	References	240

8.	The storage and preservation of meat: II—Nonthermal technologies	
	<i>D.U. Ahn, A. Mendonca, and X. Feng</i>	
8.1	Introduction	245
8.2	Ionizing radiation	246
8.2.1	History of food irradiation	246
8.2.2	Irradiation process	246
8.2.3	Mode of action	248
8.2.4	Antimicrobial aspects	249
8.2.5	Chemical and biochemical aspects	252
8.2.6	Organoleptic aspects of irradiated meat	256
8.2.7	Consumer acceptance of irradiated meat	259
8.2.8	Detection	259
8.2.9	Future roles for irradiation in the preservation of foods	260
8.3	High pressure	261
8.3.1	History of high-pressure processing of foods	261
8.3.2	High-pressure processing	261
8.3.3	Antimicrobial mode of action	264
8.3.4	Antimicrobial, chemical, and biochemical aspects	264
8.3.5	Chemical and biochemical aspects	268
8.3.6	Future prospects of HPP	270
8.4	Freeze dehydration	270
8.4.1	Histological aspects	271
8.4.2	Physical and biochemical aspects	272
8.4.3	Organoleptic aspects	273
8.4.4	Future perspectives of freeze dehydration	273
	References	274
	Further reading	280
9.	The storage and preservation of meat. III—Meat processing	
	<i>Fidel Toldrá</i>	
9.1	Introduction	281
9.2	Curing	282
9.2.1	Salting	283
9.2.2	Chemistry of nitrate and nitrite	284
9.2.3	Antimicrobial effect	285
9.2.4	Antioxidant effect	286
9.2.5	Color development	286
9.2.6	Formation of nitrosamines	287
9.2.7	Production of meat products without nitrite	289
9.3	Fermentation	290
9.4	Dehydration	293
9.4.1	Changes during drying	294

9.5	Smoking	296
9.6	Processing technologies for cured meat products	297
9.6.1	Dry-cured ham	297
9.6.2	Fermented sausages	301
9.6.3	Cooked ham	305
9.6.4	Bacon: Wiltshire cure and modern bacon production	307
9.7	Conclusions and future trends	309
	References	309
10.	The storage and preservation of meat: Storage and packaging	
	<i>Andrey A. Tyuftin and Joe P. Kerry</i>	
10.1	Introduction	315
10.2	Impact of microbiology on fresh meat quality attributes	316
10.3	Common technologies used to preserve fresh meat products and assist in a combined manner to extend product shelf life	317
10.3.1	Chilling	317
10.3.2	Superchilling	317
10.3.3	Use of chemical preservatives	318
10.3.4	Ionizing radiation	319
10.3.5	Other potential and developing technologies for raw meat and muscle-based products	321
10.3.6	Packaging technologies employed for raw meat and fresh muscle-based food products	322
10.3.7	Vacuum packaging	322
10.3.8	Heat-shrink wrapping	324
10.3.9	Vacuum skin packaging	326
10.3.10	Modified atmosphere packaging	327
10.4	Packaging materials used for fresh meat and muscle-based products	330
10.4.1	Barrier materials, test methods	330
10.4.2	Testing methods for gas barrier evaluation of films	332
10.4.3	Nanotechnologies in barrier packaging: Nanocoatings and nanofillers	335
10.4.4	Antimicrobial packaging	339
10.5	Smart and intelligent packaging systems	348
10.6	Conclusions	358
	References	358
	Relevant websites	362
11.	The eating quality of meat: I Color	
	<i>Cameron Faustman, Surendranath P. Suman, and Ranjith Ramanathan</i>	
11.1	Introduction	363
11.2	Myoglobin concentration	364

11.3	Myoglobin structure	366
11.4	Color phenomena in fresh meat	369
11.4.1	Myoglobin oxidation and reduction	369
11.4.2	Factors endogenous to meat that affect myoglobin redox stability	373
11.4.3	Factors exogenous to meat that affect myoglobin redox stability	376
11.5	Color in cooked nitrite-cured and salted uncooked meats	378
11.6	Cooked meat color	380
11.7	Anomalies in meat color	382
11.7.1	Color defects in fresh meat	382
11.7.2	Color defects in cooked meats	384
11.8	Measuring meat color	385
11.9	Summary statement	386
	References	386
	Further reading	392

12. The eating quality of meat: II—Tenderness

David L. Hopkins and Per Ertbjerg

12.1	Introduction	393
12.1.1	Definition and measurement	393
12.1.2	Effect of muscle type on tenderness	394
12.1.3	Preslaughter factors that impact on tenderness	395
12.1.4	Postslaughter factors	400
12.2	Measuring tenderness	413
12.3	Conclusions and future trends	414
	References	414

13. The eating quality of meat: III—Flavor

Mónica Flores

13.1	Aroma and taste compounds	421
13.2	Volatile compounds generation reactions	422
13.2.1	Lipid degradation (oxidative reactions)	422
13.2.2	Maillard reactions and Strecker degradation	424
13.2.3	Carbohydrate degradation reactions	427
13.2.4	Thiamine degradation	427
13.2.5	Degradation of ribonucleotides	427
13.3	Methodology for meat aroma volatile identification	428
13.3.1	Extraction of volatile compounds	428
13.3.2	Identification of aroma compounds	432
13.3.3	Aroma compounds in meat from different animal species	433
13.4	Pre- and postslaughter factors affecting aroma	435
13.4.1	Breed, sex, aging	435
13.4.2	Farming, feeding practices	436
13.4.3	Cooking	439

13.5	Off-flavors	440
13.5.1	Warmed over flavor	440
13.5.2	Irradiation odors	442
13.5.3	Boar taint	442
13.5.4	Microbial odors	443
13.6	Meat product flavor	444
13.6.1	Wet-cured meat products	444
13.6.2	Dry-cured meat products	448
13.6.3	Fermented dry-cured meat products	448
13.7	Conclusions and future trends	449
	References	450

14. The eating quality of meat: IV—Water holding capacity and juiciness

Robyn Dorothy Warner

14.1	Introduction	457
14.2	Definition of water-holding capacity and juiciness	457
14.3	Structural influences on the WHC of uncooked, cooked, and processed meat	461
14.4	Factors influencing WHC in raw muscle	463
14.4.1	pH fall postmortem, PSE, and DFD	463
14.4.2	Rigor, cold, and heat shortening	464
14.4.3	Electrical stimulation	465
14.4.4	Changes in WHC during aging	467
14.4.5	Cutting, packaging, and temperature during storage	467
14.4.6	Thaw rigor	472
14.4.7	Freezing and thawing	472
14.5	Changes in WHC during cooking of raw meat	474
14.5.1	Relationship between cooking temperature and water loss	474
14.5.2	Water loss in relation to protein denaturation	477
14.5.3	Cook loss changes with aging	478
14.5.4	Influence of sarcoplasmic proteins	479
14.5.5	Influence of high-pressure processing on WHC	480
14.5.6	Influence of sous vide cooking	481
14.6	Juiciness: Influencing factors and interactions with WHC	481
14.7	Factors influencing WBC of meat products	484
14.7.1	WHC of comminuted meats	484
14.7.2	Salt	484
14.7.3	Application of salts and bicarbonates pre-rigor	487
14.7.4	Ions and ionic strength	488
14.7.5	Phosphates	489
14.7.6	Marination	491
14.7.7	Amino acids and other additives	492
14.7.8	High-pressure processing	493

14.8	Methods to measure WHC and juiciness	493
14.8.1	Methods for measuring WHC applying no external force	493
14.8.2	Methods for measuring WHC applying external force	495
14.8.3	Indirect methods for measuring WHC	498
14.8.4	Relationships between methods	499
14.8.5	Methods for measuring juiciness	500
14.9	Conclusions and future trends	500
	References	502
	Further reading	508
15.	The eating quality of meat: V Sensory evaluation of meat	
	<i>Rhonda K. Miller</i>	
15.1	Introduction	509
15.2	Why sensory evaluation of meat is unique	510
15.3	Overview of how sensory is perceived and defining sensory attributes	511
15.4	Sensory controls for meat	521
15.4.1	Product controls	523
15.4.2	Environmental controls	525
15.4.3	Panelist controls	526
15.5	Sensory techniques	527
15.5.1	Discriminative analysis	531
15.5.2	Descriptive analysis	534
15.5.3	Consumer analysis	540
15.6	Emerging or underutilized sensory techniques	545
15.7	Conclusions	547
	References	547
16.	Meat safety—I Foodborne pathogens and other biological issues	
	<i>Alexandra Lianou, Efstathios Z. Panagou, and George-John E. Nychas</i>	
16.1	Introduction	549
16.2	Biological meatborne hazards: Prevalence, transmission, and foodborne disease surveillance	550
16.3	Meatborne bacterial pathogens and toxins	554
16.3.1	<i>Campylobacter</i> spp.	554
16.3.2	<i>Clostridium</i> spp.	556
16.3.3	Enterohemorrhagic <i>Escherichia coli</i>	559
16.3.4	<i>Listeria monocytogenes</i>	563
16.3.5	<i>Salmonella enterica</i>	566
16.3.6	<i>Yersinia enterocolitica</i>	568
16.3.7	Other bacterial pathogens	569

16.4	Meatborne viruses	570
16.4.1	Hepatitis viruses	570
16.4.2	Noroviruses	571
16.4.3	Other viruses	572
16.5	Meatborne parasites	573
16.5.1	<i>Taenia</i> spp.	574
16.5.2	<i>Toxoplasma gondii</i>	574
16.5.3	<i>Trichinella</i> spp.	575
16.5.4	Other parasites	575
16.6	Other biological issues	576
16.6.1	Prions	576
16.6.2	Biogenic amines	577
16.7	Current and future challenges to biological meat safety	579
16.8	Concluding remarks and outlook	582
	References	582
17.	Meat safety: II Residues and contaminants	
	<i>Marilena E. Dasenaki, Anastasia S. Kritikou, and Nikolaos S. Thomaidis</i>	
17.1	Introduction	591
17.2	Chemical contaminants and residues	592
17.2.1	Veterinary drug residues	592
17.2.2	Persistent organic pollutants	599
17.2.3	Heavy metals	603
17.2.4	Mycotoxins	604
17.3	Risk assessment	605
17.4	Analytical methods	606
17.4.1	Sample preparation techniques	607
17.4.2	Instrumental analysis	617
17.5	Future trends and perspectives	618
	References	619
18.	Meat authenticity and traceability	
	<i>Luca Fontanesi</i>	
18.1	General overview	627
18.2	Intrinsic characteristics of the meat	629
18.2.1	Identification of the species of origin	629
18.2.2	Identification of the subspecies or breed of origin	646
18.2.3	Individual identification of the animals: Meat traceability	649
18.2.4	Identification of the sex of the animals	651
18.2.5	Identification of genetically modified animals	652

18.3	Extrinsic characteristics of the meat	653
18.3.1	Geographic origin, feeding regimes, and production systems	653
18.3.2	Treatments and processing procedures	655
18.4	Conclusions and future trends	658

22. Sustainability II: Sustainable animal production and meat processing

Eric N. Ponnampalam and Benjamin W.B. Holman

22.1	Introduction	727
22.2	Types of animal production systems around the world	729
22.2.1	Extensive or rangeland animal production systems	731
22.2.2	Intensive animal production systems	733
22.2.3	Semiintensive animal production systems	735
22.2.4	Advantages and disadvantages of different animal production systems	737
22.3	What is sustainable animal production?	739
22.4	Why it is necessary to maintain sustainable animal production?	742
22.5	Some practices of sustainable animal production systems	743
22.5.1	Use of fresh and conserved grass pastures	743
22.5.2	Use of agri-food and industrial by-products	745
22.5.3	Utilization of low-nutritive high-fibrous roughages	748
22.5.4	Fodder and tree legumes for integrated mixed farming	751
22.5.5	Matching welfare and nutrition to genetic potential	755
22.5.6	Perennialized grazing cereals and multipurpose crops	757
22.6	Other technologies or strategies to improve sustainability of animal production	757
22.6.1	Strategies to minimize diet-related subclinical diseases	757
22.6.2	Strategies to mitigate methane gas emission	762
22.6.3	Sources of secondary metabolites and bioactive compounds for better animal health	766
22.7	Meat processing	769
22.7.1	Transport and lairage management	769
22.7.2	Slaughter	771
22.7.3	Carcass processing	772
22.7.4	Automated and on-site meat processing	774
22.7.5	Waste management	775
22.7.6	The preservation of processed meat	775

22.8	Benefits of sustainable animal production and meat processing	779
22.8.1	Economic benefits	780
22.8.2	Social benefits	780
22.8.3	Environmental benefits	781
22.8.4	Welfare benefits	782
22.9	Future opportunities and perspectives	783
22.9.1	Potential of legumes as ruminant feeds	785
22.9.2	Potential of lipids as ruminant feed supplement	786
22.9.3	Potential of antioxidants in livestock feeds	787
22.9.4	Potential of feeds containing secondary metabolites and bioactive compounds	787
22.9.5	Potential of matching nutrition to genetics	788
22.9.6	Potential for animal transport and slaughter	789
22.9.7	Potential of packaging technology for better meat processing and preservation	789
22.10	Conclusions	790
	Acknowledgment	792
	References	792
23.	Future meat market	
	<i>Wangang Zhang and Dacheng Kang</i>	
23.1	Introduction	799
23.2	Trends in plant-protein-based meat analogs	801
23.2.1	Plant protein structure and functionality	801
23.2.2	Processing of plant-protein-based meat analogs	804
23.2.3	Challenges and opportunities	809
23.3	Trends in insect proteins to be used in meat products	811
23.3.1	Nutritional aspects and risks of insect consumption	812
